          Genetically engineered endothelial cells - which exhibit enhanced cell migration, urokinase-type plasminogen activator activity, and reduced mononuclear cell adhesion and fibronectin prodn
```

Disclosure; Page 69-72; 91pp; English.

The DNA encoding a portion or (more preferably) the entire pp60 c-src polypeptide is used to transform endothelial cells. Transformed cells produce increased amounts of pp60 c-src and have improved therapeutic properties. They migrate at faster rates than non-transformed counterparts; have an enhanced ability to inhibit the formation of thrombi and/or dissolve thrombi once they have formed and exhibit reduced mononuclear cell adhesion. They can also be used to improve the success of surgical procedures such as coronary angioplasty, heart bypass surgery, vessel graft and stent implantation.

Sequence 1611 BP; 334 A; 507 C; 504 G; 266 T; 0 other;

                        Genetically engineered endothelial cells - which exhibit enhanced cell migration, urokinase-type plasminogen activator activity, and reduced mononuclear cell adhesion and fibronectin prodn
               Disclosure; Page 75-77; 91pp; English.
                        The DNA encoding a portion or (more preferably) the entire pp60 c-src polypeptide (Given in AAQ46688) is used to transform endothelial cells. Transformed cells produce increased amounts of pp60 c-src and have improved therapeutic properties. They migrate at faster rates than non-transformed counterparts; have an enhanced ability to inhibit the formation of thrombi and/or dissolve thrombi once they have formed and exhibit reduced mononuclear cell adhesion. They can also be used to improve the success of surgical procedures such as coronary angioplasty, heart bypass surgery, vessel graft and stent implantation.
                         implantation.
                         Sequence 536 AA;

                                                    Patent No. 5336615

GENERAL INFORMATION:
APPLICANT: Bell, Leonard
APPLICANT: Madri, Joseph A.
APPLICANT: Warren, Stephen L.
APPLICANT: Luthringer, Daniel J.
TITLE OF INVENTION: Genetically Engineered
TITLE OF INVENTION: Endothelial Cells Exhibiting Enhanced
TITLE OF INVENTION: Migration,
TITLE OF INVENTION: and Plasminogen Activator Activity
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
                                                       NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS: 4
CORRESPONDENCE ADDRESS: ADDRESSEE: Maurice M. Klee
STREET: 1951 Burr Street
CITY: Fairifield
STATE: Connecticut
COUNTRY: USA
ZIP: 06430
COMPUTER READABLE FORM:
MEDIUM TYPE: 5.25 inch, 360 Kb storage
COMPUTER: IBM PC XT
OPERATING SYSTEM: PC-DOS/MS-DOS 2.10
SOFTWARE: Displaywrite 3
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/07/820,011A
FILING DATE: 19920106
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: Riee, Maurice M.
REGISTRATION NUMBER: 30,399
REFERENCE/DOCKET NUMBER: LB-101
TELECOMMUNICATION INFORMATION:
TELEFAX: (203) 255 1400
TELEFAX: (203) 255 1400
TELEFAX: (203) 254 1101
INFORMATION FOR SEQ ID NO: 4:
SEQUENCE CHARACTERISTICS:
LENGTH: 536 amino acids
TYPE: AMINO ACID
TOPOLOGY: Linear
MOLECULE TYPE: Protein
HYPOTHETICAL: NO
FRAGMENT TYPE: Complete Sequence
ORGANISM: Homo sapien
PUBLICATION INFORMATION:
                                                                 CORRESPONDENCE ADDRESS:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                            1609.4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC and gene mapping, and in recombinant production of (II). The
CC polymcleotides are also used in diagnostics as expressed sequence tags
CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC (II). (II) is useful for generating antibodies against it, detecting or
CC quantitating a polypeptide in tissue, as molecular weight markers and as
CC a food supplement. (II) and its binding partners are useful in medical
CC imaging of sites expressing (II). (I) and (II) are useful for treating
CC disorders involving aberrant protein expression or biological activity.
CC The polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC diagnostic coding sequences of the invention.
CC diagnostic coding sequences of the invention.
CC Note: The sequence data for this patent did not appear in the printed
CC art for winn introducts obtained in electronic format directly from WIPO

of the polyperide and polynucleotide is equenced to the printed

The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                         polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynucleotide and encoded polypeptides, useful diagnostics, forensics, gene mapping, identification of mutaresponsible for genetic disorders or other traits and to assure the control of t

The polynucleotides can be used in the diagnosis of disorders associated with foam cell development such as atherosclerosis, cerebral stroke, and cardiovascular disorders such as coronary artery disease. The polynucleotide sequences can also be used as PCR primers and probes. The polynucleotides of the invention are also useful in gene therapy. AAS94746-AAS95021 represent the human polynucleotide sequences of the invention which are differentially expressed during foam cell differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to the isolation of human polynucleotide sequences that are differentially expressed during foam cell differentiation. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

The specification describes a method for modulating vascular permeability in a tissue suffering from a disease condition. The method cc comprises contacting the tissue with a pharmaceutical composition comprises the present of the method is useful for modulating comprises or contacting them. The method is useful for modulating composition contacting them the method is useful for modulating composition contacting the process of the contacting them the method is useful for modulating composition contacting the process of the contacting them the method influence of contacting them to blood vessels, and other systemic pathological events such as atherosclerosis, diabetic retinopathy, inflammatory disease due to infection by microbial agents and arthritis. Other diseases which can be treated include adult respiratory distress syndrome (ARDS), rheumatoid carefullary proliferation in atherosclerotic plaques and osteoporosis and cancer associated disorders such as solid tumours, solid tumour contacting the method of the treated includes and is used in the method of the treated in the contaction of the present sequence.

```

normal flow, tissues undergoing restenosis, psoriatic, retinal tissue and similar tissues. Pathologies which may be treated include include trauma to blood vessels, and other systemic pathological events such as atherosclerosis, diabetic retinopathy, inflammatory disease due to infection by microbial agents and arthritis. Other diseases which can be treated include adult respiratory distress syntoreme (ARDS), rheumatoid arthritis, diabetic retinopathy, psoriasis, neovascular glaucoma, capillary proliferation in atherosclerotic plaques and osteoporosis and cancer associated disorders such as solid tumours, solid tumour metastases, angiofibromas and hemangiomas. The present sequence represents human Yes, and is used in the method of the invention. nucleic acid expressing them. The method is useful for modulating vascular permeability in tissues, including inflamed tissue, tissues associated with stroke, myocardial infarction or other blockage of permeability in a tissue suffering from a disease condition. The comprises contacting the tissue with a pharmaceutical composition comprising tyrosine kinase protein Src, Yes or their mixtures or the mixtures or their mixtures or the mixtures of the mixtures or the mixtures of the mixtures or the mixtures or the mixt The specification describes a method for modulating vascular method

(II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polypucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fifty. Wipo.int/pub/published_pct_sequences.

The method comprises detecting the presence or absence of a genetic mutation in the yes1 gene of the cubic subject, where the genetic mutation is a substitution, insertion or a confidence of the production of a yes1 protein having an amino condition and results in the production of a yes1 protein having an amino condition and results in the production of a yes1 protein having an amino condition and the presence of the genetic mutation identifies a subject that has or is at the presence of the genetic mutation identifies a subject that has or is at the presence of the genetic mutation identifies a subject that has or alter the amount of the protein, or alter the activity of the yes1 gene product, are useful for treating a yes1 mediated neuropsychiatric disorders include Huntington's consequence protein and disorders include Huntington's consequence protein and disorders from the method distinguishes neuropsychiatric disorders from the protein and the protein an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Align seg 1/1 to:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        'gnment_block:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   immunoreactivity to host self-determinants on the product of proto-oncogene. The cellular immunogens are used for protective vaccination against cancer (e.g. carcinoma of breast or colon, or various lymphomas) and for immunotherapy of cancer. Use of the immunogen eliminates the need to isolate immunogenic, HLA host-matched peptides. The method is not based on immune recognition of a determinant defined by a cancer-specific mutation and generates a systemic (anti-metastatic)
                                                                                                                                                                                          1007
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1804

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Date: Jun 4, 2002 10:37 AM
